

Favco goes live with Ironbark Fresh Produce

30 MARCH 2005, BRISBANE: Favco have joined an ever expanding club by going live with Ironbark Fresh Produce business management software in a deal worth over \$140K.

With a business growing as quickly as Favco, the company was forced to face the fact that the existing solution was struggling to keep up with the demands of the business and it was time to upgrade.

As supplier to many of the biggest and best performing fresh produce companies in Australia and backed by many years' experience of working in the sector, Ironbark were the obvious choice.

Favco have installed the full fresh produce system which provides them with fresh produce industry specific features such as stock control, levy, handling and freight charge management, pallet tracking, interface to the Brismark electronic payments system, supplier returns with recipient created tax invoices and the ability to make supplier payments by electronic transfer.

This is all backed up by a fully integrated and comprehensive suite of financial modules incorporating general ledger, debtors, creditors and payroll functionality.

The installation of Ironbark Fresh Produce coupled with the customisations developed through a consultative approach between both companies has resulted in a solution that allows Favco to concentrate on running and growing their business. All this, with the peace of mind of a market leading management software system that they can depend on.

"Ironbark's long experience in the marketplace and their focus on new innovation was a key part of our decision to choose them. We were looking for a long term management solution and with Ironbark Fresh Produce, we have a system that is capable of growing with us." commented Shane Clarke, Managing Director at Favco Queensland.

Ironbark and Favco are looking forward to a long and fruitful working relationship and are currently working on the integration of new technologies to improve the Favco systems further - better stock control through barcoding and scanning and direct sales entry through PDA devices.

Ironbark's business management software solutions are developed in C#, the most current and future proof development language and part of the Microsoft .NET environment.
