

Module Overview

The **Ironbark Sales Analysis** module interacts with Customer Orders to provide online analysis of sales by user defined criteria. New reports can be added or existing reports modified at any time and data rebuilt for current or prior years.

All sales costs are updated at the time of payments or from back flushing within the Ironbark system. Sales forecasts can be easily generated based on actual sales history. These forecasts can be used to produce sales re-order reports.

Ironbark Sales Analysis is a full reporting solution.
