

Fylost Roto-Plastics (OZpoly) grows with their Ironbark® Manufacturing System...

Company Profile www.ozpoly.com.au

Fylost Roto-Plastics Pty Ltd (now trading as OZpoly), commenced operations in 1983 at its Innisfail manufacturing plant specialising in the manufacture of fibreglass products for commercial and industrial applications. Over a period of seven years the company developed a reputation for supplying high quality fabricated fibreglass tanks designed specifically for the Aqua-cultural Industry.

In 1989 the Company's Directors anticipated a move in the market away from fibreglass to Rotationally Moulded Products using polyethylene. Later that year Fylost acquired its first Rotational Moulding Machine, the first of three CNC machines owned by the company in Innisfail. This makes Fylost Roto-Plastics Pty Ltd the longest established Rotational Moulder in Queensland, providing an extensive range of products and targeting new markets, not previously satisfied by Fibreglass. These products include water, molasses and chemical storage tanks; troughs and other custom moulded products.

Business Issues

OZpoly were utilizing an off the shelf product for their financial management requirements but were unfortunately experiencing minimal flexibility of that system with the lack of customization and development available from this other vendor. The system was not meeting their manufacturing needs.

The Solution

Ironbark Manufacturing is an ERP (Enterprise Resource Planning) system which has been specifically developed for the Manufacturing industry.

Ironbark provided a flexible approach when implementing OZpoly's intelligent, robust, user friendly Ironbark Manufacturing solution.

Why Choose Ironbark?

OZpoly have identified their reasons for choosing Ironbark as:

- Ironbark provided for strong financial management and reporting functionality
- High level of customization available
- Flexibility
- Ironbark provided development opportunities for Fylost who were able to design specific applications for their unique system requirements
- Ironbark has been established for over 30 years

Brisbane Branch

The Benefits

Ironbark is strategically placed to provide solutions specifically requested by OZpoly.

Since implementing the Ironbark Manufacturing system in 2005, OZpoly have been able to grow and move forward within their Ironbark system, making the possibilities endless...

Flexibility of the Ironbark system is also a key benefit and has enabled the streamlining of OZpoly's manufacturing processes.

Ironbark are proud to deliver a smart manufacturing system to the OZPoly group.

“We value the fact that Ironbark are able to promptly implement our ever changing requirements in this dynamic industry. This has given us the edge we need to stay competitive. We look forward to our ongoing partnership with Ironbark Software...”
